CONT

ocular tension and pupil diameter show different phase reactions during the different stages of glaucoma. 66 experiments were carried out on 10 rabbits. The 10 control experiments confirmed the known pupil dilatation and fall of intraocular tension after ergotamine (III) (0.00075 g./kg. i.m.). When a 0.1% solution of I was instilled into one eye of a rabbit pretreated with III, the pupil of this eye was dilated more than that of the other eye, as seen after a stronger (1%) solution of I (in 5 of 7 experiments), this is regarded as a paradoxical reaction. In the same experiments the intraocular tension remained high instead of being lowered; this is regarded as an inverted reaction (3 of 7 experiments). In 5 III-treated rabbits the instillation of a 1:5,000 solution of I into the right eye led to pupil dilation, in comparison with the left eye, corresponding to that produced by a stronger (1%) solution of I (paradoxical reaction). In the other 5 rabbits of the same test group, 1:5,000 I led to constriction of the pupil in comparison with the untreated left eye (inverted reaction). In 3 of 9 rabbits pretreated with III, instillation of 0.1% solution of II into the right eye produced an increased miotic effect (paradoxical reaction). In 8 of 10 III-treated rabbits the instillation of a 1:5,000 solution of II into the right eye led to a degree of pupil dilatation surpassing that produced by III alone in the left eye (inverted reaction) (49 references).

Orig Pub: Leka promishlenost, 1956, No 10, 18-22.

Abstract: Pilot plant experiments were conducted on the preparation of dry food concentrates (soups) and the corresponding laboratory investigations of the finished products (determination of moisture content, ash, fats, proteins, carbohydrates, acidity, NaCl, cellulose). The necessity of establishing this branch of the food industry in Bulgaria is discussed. Diagrams of the units are shown and their operation is described; a proposed flowsheet of the process is included.

TITLE: Chromosome abnormalities in a patient suffering from Huntington's chorea

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 4, 1965, 389-392

TOPIC TAGS: human genetics, heredity, nervous system disease, neurology, man, cytology

ABSTRACT:

Huntington's chorea is a hereditary disease handed down in a dominant manner. Since no data exist in the literature concerning the cytogenetic investigations of this disease, the authors are publishing the results of a chromosome analysis of one 50-year-old male patient whose diagnosis was supported by the fact that the brother of the patient's father is suffering from chorea, too. The cytogenic investigation was carried out on metaphase chromosomes of dividing leucocytes of the

Card 1/2

ACC NR: AP6008222

patient's peripheral blood, cultivated by Moorhead's method as modified by Jungklaas (Dtsch. med. Wochenschr., 1963, 1200, 4). However, after presenting their results, the authors note that chromosome aberrations of the type described affecting group 6-12 have been observed by some authors, though rarely (N. P. Bishun et al., Lancet I, 1964, 936; R. H. Heller, Ibid., 1964, No 2, 481; J. Ruffie et al., Nouv. rev. fr., d'Hematol, 1964, 551). This fact as well as the isolated character of the present observation do not, as yet, furnish sufficient grounds for an assertion that the chromosome abnormalities described are specific for the disease and still less that they determine its appearance or development. The paper was submitted by K. Bratanev, Corresponding Member Bulgarian Academy of Sciences, 5 December 1964. Orig. art. has 6 figures.

Title : The Inorganic Phosphorus Content of Beef Plasma.

Orig Pub : Izv. In-ta eksperim. vet. med. B'lg. AN, 1956, 137-143

Abstract : The inorganic P content of the blood of calves up to 3 months of age amounts to 7.6 mg%; that of calves 3 to 6 months of age amounts to 6.5 mg%. In cows the blood phosphorus content is reduced to 4.8 mg%. The fluctuations in blood phosphorus content (3.3 to 5.8 mg%) seen in cattle from different collective farms depend chiefly on the composition of the fodder.

TITLE: Luminescent matrix for photorecording images produced by electronic computers

SOURCE: Avtomatika i priborostroyeniye, no. 1, 1964, 28-31

TOPIC TAGS: luminescent matrix, computer, computer output, computer output photorecording, EL-510 phosphor, EL-460 phosphor

ABSTRACT: Experiments with recording the output information of computers on luminescent 256 x 256-element plates ("matrices") and photographing it are described. Each element is 0.5 x 0.5 mm, and the distance between elements is 0.5 mm. A line-by-line exposure is used to ensure higher speed and contrast of the plates coated with EL-510 (green) and EL-460 (blue) phosphors.

Card 1/37

ACCESSION NR: AP4020313

Characteristic curves for two types of film are given. Symbol formation as shown in Enclosure 1 permits a recording rate of 700 symbols per sec; 21 lines, 40 symbols in each line, are used. The same plates permit the recording of drawings, sketches, etc. A nonlinear-resistance powder based on CdS can be used to increase the contrast of the plates. It is claimed that a plate treated with this powder can ensure a recording rate of 10,000 symbols/sec. Orig. art. has: 5 figures, 7 formulas, and 1 table.

Title : The Analysis of Adrenaline Mixtures or the Hydrochlorides of Adrenaline and Procaine by Filtration Chromatography.  
Abstract : The separation of adrenaline (I) or adrenaline HCl (II) and procaine HCl (III) has been achieved by the method of filtration chromatography. The ratio of the components may be I:1000, the concentration of  $\geq 1:30000$ . 1 ml of an aqueous solution containing  $\geq 1-2\%$  of I or II in 0.005 ml is mixed with 0.05-0.1 ml of a 15% NaOH solution and passed through a small filter. The tip of the filter is brought in contact with the starting line of a filter paper strip for as long as it takes for the spot to attain a diameter of  $\sim 1$  cm. After drying, the chromatogram is run by ascending chromatography for 20-30 min. with 95%  $C_2H_5OH$ . I (or II) remains on the starting line, III is displaced by the solvent front. The

Title: *Combating Sudden Ejections of Coal and Gas From Coal Mines (Sorba s vysokim vydryvom uchuya i gaza v nepriznayushchikh)*

Source: Conference at the Institute of Mining of the Ac.Sc. USSR (Borovskobrashchi) v Institute gosudarstvennoy dekollektivizatsii SSSR

Periodicals: Izvestiya Akademii Nauk SSSR Otdeleniye Tekhnicheskikh Nauk, 1958, No. 4, pp. 153 - 156 (USSR)

Abstract: On February 17 - 21, a conference was held at the Institute gosudarstvennoy dekollektivizatsii Akademii Nauk SSSR (Mining Institute of the Ac.Sc.USSR) on the results and prospects of research work on combating sudden ejections of coal and gas and coal explosions in mines. Members of the Central Commission for combating sudden ejections of coal and gas, representatives of scientific research and project institutes and higher teaching establishments participated in the conference. After a brief opening speech by Academician N.I. Smirnov, the following papers were read at the conference: "Investigation of the Conditions and Methods of Application of Local Methods of Preventing Sudden Ejections of Coal and Gas in Preparatory workings and in dressing" (L.S. Kirodov); "Development of a Combination of Measures for Safe Mining of Coal in Stopes in Protected Zones of Seams Which are Dangerous From the Point of View of Sudden Ejections of Coal and Gas" (A.N. Krichavsky); "Planning a Safe and Productive System of Working Individual Steeply Sloping Seams Which Serve as Facilitation to Develop Sudden Ejections of Coal and Gas" (D.S. Lohabid); "Planning an Effective System of Working Thin Seams for the Purpose of Utilizing Them as Protective Seams" (B.S. Lohabid); "System of Working of the Peasachetsa Mine of the 1a Artes Trust of Dzherzhinskogorsk (Ural'sk Oblast)" (V.Y. Tsvetkov); "Individual Seams of the Dzherzhinskogorsk Donbasse Region Where There is a Danger of Sudden Ejections of Coal and Gas" (G.P. Borodulin); "Safe and Effective Methods of Working Coal Seams" (D.V. Ponomarenko); "The Possibility of Reducing the Probability of Sudden Ejections of Coal and Gas" (Yu. A. Slobodkin); "Investigation of the Tendency to Ejections of Coal of the Kuznetsk'kaya anthracite

AUTHORS: Zhivlyuk, Yu, N., Mandel'shtam, S. L.

TITLE: Lightning temperature and thunder power

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 40,  
no. 2, 1961, 483-487

TEXT: The authors present preliminary results of spectroscopic temperature measurements in the lightning channel in the high-current stage, and of calculations of the pressure at the front of the shock wave produced by the lightning. The conditions of channel formation and the condition of the plasma herein were first studied in spark discharges on air in the laboratory. In such experiments, the electron concentration in the spark plasma is mostly  $N_e > 10^{17} \text{ cm}^{-3}$ ; the atoms and ions are in Boltzmann excitation distribution which is conserved for about  $10^{-7}$  sec; the plasma radiates according to Kirchhoff's law practically during the entire time of its existence. During  $\sim 10^{-6}$  sec the gas temperature is equal to the electron temperature  $T_e = T_i = T$  so that the gas temperature is obtained when the tempera-

V

Lightning temperature ...

ture is spectroscopically determined from the atomic lines. These results are also applicable to lightnings since in the lightning channel (according to estimations of the H<sub>α</sub> and H<sub>β</sub> line widths) the electron concentration is of the same order of magnitude. The authors then give estimations of the optical density of the plasma for various parts of the line NH3995 Å, which are also discussed. The results for T~2.10<sup>4</sup> K, λ~4000 Å, channel diameter l = 10cm, and N~10<sup>17</sup> cm<sup>-3</sup> are given in Table 1; k<sub>ω</sub> is the absorption coefficient of the plasma for the frequency ω; it is determined by the intensity law of the spectral line I(ω) = I<sub>0</sub>(ω)(1-e<sup>-k<sub>ω</sub>l</sup>), and by

$$k_{\omega} = k_0 \frac{a}{\pi} \int_{-\infty}^{+\infty} \frac{\exp(-y^2)}{a^2 + (v-y)^2} dy, \quad (2)$$

$$\epsilon_0 = (2\pi^2 n/mc) (N/\Delta\omega_0), \quad v = 2(\omega - \omega_0)/\Delta\omega_0.$$

Lightning temperature....

$I_0(\omega)$  is the radiation intensity of a black body having the same temperature as the channel. The authors took pictures of lightning spectra by night, by means of the spectrographs  $\mathcal{G}$ -48 (SP-48) and  $\mathcal{G}$ -49 (SP-49) (slit width 0.1 mm). They used Panchrom-X and "D" (D)-type films. To until a blackening of  $S=0.2$  was attained. Thus, sensitivity could be increased by 3-4 times. The film was then photometrically recorded by a microphotometer of the type M $\delta$ -4 (MF-4). Altogether, 9 spectrograms were evaluated (about 100 lines). Most of the lines belonged to neutral or singly-ionized O or N atoms; the lines 5600, 5471, 4542 and 4058 Å can be ascribed to OIII, UV or NIII; also  $N_2^+$  band edges and an intense continuous spectrum were found. About 50% of all lines were observed for the first time. The channel temperature was calculated from various lines; results are given in Table 2. The diverging values are due to errors in measurement. The mean temperature value in the channel,  $21,000^6$  K, is in good agreement with the results obtained by S. I. Braginskiy by the hydrodynamic

Lightning temperature....

theory:  $T = 4.35 \eta_0^{1/14} (Jt^{-3/4})^{2/7}$ . Here,  $\eta_0$  is taken in the unit  $1.29 \cdot 10^{-3} \text{ g/cm}^3$ , J in ka, t in  $\mu\text{sec}$  and T in ev. This theory is then used to calculate the radius of the lightning channels, the speed of the shock wave front, and the front pressure of the shock wave. The following values are obtained:  $r = 1.11 \eta_0^{1/4} \eta^{5/56} J^{5/14} t^{13/56}$ ,

$a = 5.55 \cdot 10^5 \eta_0^{1/4} \eta^{5/56} J^{5/14} t^{-43/56}$ ;  $p_{\text{front}} = \frac{2 \rho_0 a^2}{\gamma + 1} - \frac{\gamma - 1}{\gamma + 1} p_0$ ;  $p_0$  - atmospheric pressure,  $\eta$  - an energy ratio. The lightning spectra were taken at the Zvenigorodskaya stantsiya Instituta fiziki atmosfery AN SSSR (Zvenigorod Station of the Institute of Physics of the Atmosphere AS USSR) in summer 1958. The authors thank V. S. Prokudina for assistance, V. I. Krasovskiy for making possible their work at the station, and I. P. Tindo of the FIAN for assistance. A. A. Mak is mentioned. There are 3 tables and 10 references: 7 Soviet-bloc and 3 non-Soviet-bloc.

AUTHOR: Zhivlyuk, Yu. N.

TITLE: Spectroscopic determination of the electron temperature of a plasma under weak electron runaway conditions

SOURCE: Diagnostika plazmy\* (Plasma diagnostics); sb. stately. Moscow, Gosatomizdat, 1963, 62-67

TOPIC TAGS: plasma temperature, plasma radiation, plasma conductivity, runaway electron, plasma electron temperature

ABSTRACT: The method is based on the definite connection existing between the level population and the average electron energy (inelastic collisions of the second kind between the electrons and the ions, and absorption of radiation, are neglected). The case of weak runaway of electrons in the electric field is considered, when the electron velocity distribution function is constant inside velocity-

Card 1/2

ACCESSION NR: AT4025294

space cylinder bounded by the upper and lower runaway boundaries. It is shown that even weak runaway of electrons causes the electron velocity distribution function to deviate from Maxwellian and result in incorrect values of the temperature. The limits within which Maxwellian distribution can still be employed are given. It is also shown that weak runaway of electrons does not influence the plasma conductivity. Orig. art. has: 3 formulas.

TITLE: Geophysical sketch map of Kazakhstan

SOURCE: International Geological Congress. 22d, New Delhi, 1964, Geologicheskiye rezul'taty prikladnoy geofiziki (Geological results of applied geophysics); doklady sovetskikh geologov, problema 2. Moscow, Izd-vo Nedra, 1965, 142-154

TOPIC TAGS: regional geophysical map, geological mapping, tectonics, ~~geophysical map, geological mapping, tectonics~~

ABSTRACT: On the basis of regional geophysical and geological investigations (seismic, gravimetric, magnetoelectric), a composite geophysical sketch map of the physical fields of Kazakhstan has been compiled. From this map, the major tectonic zones, deep structures, and geological structural zones are defined. Long zones representing high field gradients in the gravitational and magnetic fields reflect deep geosutures, which seismic sounding data suggest are scarps in the M-discontinuity.

TITLE: The Synthesis of Some Carbon-Carbon Derivatives of Carbohydrates (Sintez nekotorykh uglerod-uglerodnykh proizvodnykh uglevodorov)

PERIODICAL: Doklady AN SSSR, 1957, Vol. 117, Nr 6, pp. 990-992 (USSR)

ABSTRACT: As described earlier (references 1 - 4) the organomagnesium method brought about good results in the synthesis of the above-mentioned derivatives of d-glucose, d-galactose, d-xylose and l-arabinose which contain various "aglucones". In the present work this method was employed for the production of some new compounds: phenyl-tetraacetyl-galactose, O-tolyl-triacetyl-xylose, allyl-tetraacetyl-galactose and allyl-triacetyl-arabinose. It was found that the acetylated allyl sugars are capable of adding a chloro-, bromo- and dirhodane-molecule at the double bond of the allyl residue. Haloid-derivatives of the already earlier synthesized phenyl-triacetyl-xylose were also produced. Acetochlormonosaccharides which serve as initial products in the synthesis of the C-C derivatives of hydrocarbons were obtained due to the treatment

of sugar acetates with phosph phosphorus pentachloride and aluminum chloride in a chloroform solution. An experimental part with the description of the production methods of the following compounds is given:  $\beta$ -chloro-triacetyl-1-arabinose, di-bromo-phenetyl-triacetyl-xylose, di-chloro-phenetyl-triacetyl-xylose, dibromo-mallyl-triacetyl-xylose, di-bromo-mallyl-tetraacetyl-glucose, di-rhodone-allyl-tetraacetyl-glucose and di-rhodane-allyl-triacetyl-xylose beside some above-mentioned sugar derivatives together with constants. There are 8 references, 5 of which are Slavic.

TITLE: On the theory of dual control

SOURCE: Moscow. Institut avtomatiki i telemekhaniki. Samoobuchayushchiesya avtomaticheskiye sistemy (Self-instructing automatic systems). Moscow, Izd-vo Nauk., 1968, 201-209

TOPIC TAGS: automatic control theory, second order differential equation, differential equation solution, approximation method

ABSTRACT: Various pursuit problems are considered in the article. Methods for the solution of these problems, based on notions of dual-control theory, are proposed, and some experimental information is given. Bayesian strategy in the Feldman and Bellman formulation is studied, and the relation of the theory of approximation to the Bayesian principle is analyzed. In their computations, the authors have made a wide use of the optimality principle and the techniques of dynamic programming. A numerical example involving a second-order differential equation is solved, and there is a brief discussion of the work by V. P. Zhivoglyadov.
